Subject: Sulfur project

Hi Keith,

I hope I'm not too late for the public comment period.

We really do need jobs in our area, but I think they should be clean or green jobs. The project of 266 truckloads a day of sulfur being loaded and transported through town really concerns me. I remember growing up here in Anacortes when the air stank of sulfur from the paper mill--not inviting. The current project does sound like a step into the past. I hope we don't have to resort to transporting toxic waste to improve our economy. It could have a deleterious effect not only on the health and aesthetics of the immediate neighborhood, but the entire community.

Please let's scrap this project and keep our community beautiful for ourselves and for tourists who want to come and enjoy this area. Don't drive them away with toxic waste.

Thanks for your consideration.
